1. Strive for Consistency

Strengths

- I. Icons and navigation buttons across all pages are well aligned and consistently styled.
- II. Repeated elements (e.g. language selection, search bar, virtual character assistant) appear uniformly across all screens.
- III. Consistent terminologies (e.g. explore, help etc.), visual layout, uniform labelling and interaction cues (e.g., click actions) are used.

Improvements

- I. In some pages, the 'back' button is inconsistent. Most pages use an 'X' symbol (top right corner) as a back function or to close popups but in pages 2.3, 2.4 and 2.7 '◀' (left-pointing triangle) is used in top right or left for back navigation causing inconsistency.

2. Cater to universal usability

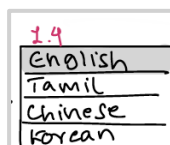

Strengths

- I. Multiple language options (English, Tamil, Chinese and Korean) are provided to support different user groups.
- II. Accessibility features like audio description of rides in pages 2.3 and 2.7 and zoom in and out features in page 2.1 are provided to freely explore the map.
- III. Clear visual cues like color coding and icons helps with better understanding.

Improvements

- I. Include an additional 'More languages' expandable dropdown option for users unfamiliar with the four supported languages.

3. Offer Informative feedback

Strengths

- I. Real time and timely updates like weather updates, latest news including maintenance info. and ride closures are provided.
- II. People detection in group registrations provides feedback (gender, age, height), shows real-time recognition and allows user editing.
- III. Users are prompted to sign in to add activities.

Improvements

- I. Adding feedback with animations or visual ticks like 'Ride added to plan', 'Person Deleted' or 'Plan saved' once user completes the plan will improve interactivity.

4. Design dialogs to yield closure

Strengths

- I. In pages, 1.1, 2.1, the icons/buttons at the top and bottom are equally spaced and well labelled.
- II. Instructions like "Tap the map to explore" guide the user flow.

Improvements

- I. Lack of clear confirmation when tasks are completed (e.g., Group successfully registered).

5. Permit easy reversal of actions

Strengths

- I. Users can add and remove members in the group activities and people detected during group registration.

Improvements

- I. Lack of undo, redo and 'Reset/Clear Plan' options in page 3.1- 'My plan' prevents users from reversing actions (added activities) or resetting the entire plan if they wish to start over.

6. Support internal focus of control

Strengths

- I. Users can turn on/off sound (2.3, 2.7).
- II. Features like explore, help, queues are accessible without sign-in except for creating a plan.
- III. Virtual character acts as an optional assistant, not forced.

Improvements

- I. Some pages/popups lack cancel or close button such as page 1.4 (to close the language pop up if not choosing any language), 1.3 (if user does not want to confirm people detected), 2.5 (if user does not want to sign in), 2.6 (to close the direction page), and 4.3 (to close the search bar in case user no longer wishes to search).

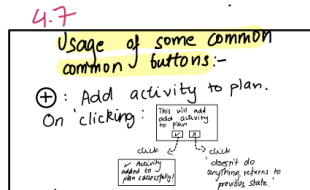

7. Reduce short term memory

Strengths

- II. Most elements are visually grouped and labelled well e.g. weather information, search bar, time and language selection across all pages.
- III. Help option is provided in case users need guidance.

Improvements

- I. For adding activity, after clicking on +, system shows a pop up to confirm or cancel. Such repeated popups when adding many activities can be annoying. Visual ticks with feedback like 'Ride added to the plan' can be used instead.

- II. Add search option in page 2.4 to avoid excessive scrolling.

8. Prevent errors

Strengths

- I. Search bar supports autocomplete and shows related searches.
- II. Sign-in prompts prevent creating plan anonymously.
- III. People detection during group registration is editable, allowing corrections.

Improvements

- I. No undo, redo while modifying activities and persons in pages 3.1 and 3.2.

Additional comments

1. Points to consider:

- I. Group Registration: Group is registered by detecting users standing in front of the camera. However, it is unclear how additional members are added if the entire group fails to fit in the frame. Does clicking on '+' allow manual typing or rest of the users stand in the front of the camera so that system can detect them to add?
- II. Adding Activities: No clarity provided on what happens if users add rides, they are ineligible for (e.g. height restrictions) or if a ride/place is closed for the day.

2. Jakob Nielsen's Heuristics:

- I. **Aesthetic and Minimalist Design:** This Lo-Fi Prototype has a clean, simple layout with understandable icons.
- II. **Match Between the System and the Real World:** Real word metaphors through familiar terms and icons are used. Timeline in 'My Plan' page 3.1 mirrors real time format.

III. Help and Documentation:

Strengths

- Help button with documentations and contact details is provided.

Improvements:

- To improve it further, User Survey/Feedback form feature can be included. Without it, designers miss out on valuable insights and users may feel unheard affecting users' trust.
- A quick onboard tutorial, tips or a short walkthrough can be added to this section to help first time or confused users.
